A brief CV and how it relates to Programming

School and pre-university:

• BASIC, specifically QBASIC

Undergraduate Masters in Mathematics & Physics (MPhys):

- Fortan 90 and Pascal for numerical computation on Unix
- HTML for webpages, LATEX for scientific reports

Worked in IT for a few years

• C programming on DOS, Visual Basic on Windows, SQL

▲□▶ ▲□▶ ▲ □▶ ▲ □▶ ▲ □ ● ● ● ●

Importance of documentation and testing!

Interdisciplinary Masters (MSc), and Bioinformatics PhD

• Python including Biopython, and a little MatLab

Bioinformatics Postdoc (at SCRI/JHI)

More Python and Biopython

Why Python? ○○●○	Why Biopython?	Examples 0000	Personalised history	Getting involved	Thanks 00	Next steps
Right la	anguage	for the	task?			

- Scripting: Automating tasks, gluing tools together
 - Usually written in Perl, shell script, Python, ...
- Tools: Specialist programs to do one job
 - Often written in a compiled language like C for speed
- Webtools: Often a front end to existing tools
 - Often written in an interpreted language like PHP, Perl, Ruby or Python

◆□▶ ◆□▶ ◆□▶ ◆□▶ □ のQで

Python is flexible enough to do all of this.

▲ロト ▲得ト ▲ヨト ▲ヨト - ヨ - の々で

- Link to C or Fortan code (for speed)
- Numerics: NumPy and SciPy
- Graphics: MatPlotLib (pylab), ReportLab, ...
- Databases: SQLAlchemy, ...
- Websites: Danjo, TurboGears
- Biology: Biopython, Galaxy, ...

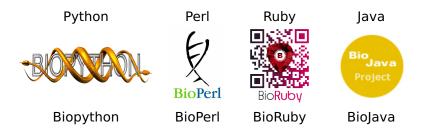

Why Python?	Why Biopython? ●○○○	Examples 0000	Personalised history	Getting involved	Thanks 00	Next steps
What is	s Biopyth	on?				

- Free, open source library for bioinformatics
- Supported by Open Bioinformatics Foundation
- Runs on Windows, Linux, Mac OS X, etc
- International team of volunteer developers
- Currently about three releases per year
- Extensive "Biopython Tutorial & Cookbook"

◆□▶ ◆□▶ ◆□▶ ◆□▶ □ のQで

• See www.biopython.org for more details

- All the Bio* OBF projects are now mature and capable...
- Which programming language are you comfortable in?
- Which language/library do your group/colleagues use?
- Do you have any specific needs to narrow the choice?

Why did I choose Biopython? Because I chose Python

- I knew several programming languages already
- There were no other programmers in my research group
- I didn't know Perl, Java or Ruby:
 - I'd looked at Perl and didn't like it
 - Java seemed too heavy for scripting
 - I don't recall being aware of Ruby as an option
- I'd been introduced to Python during my MSc and liked it!

Why Python? 0000	Why Biopython? ○○○●	Examples 0000	Personalised history	Getting involved	Thanks 00	Next steps
Zen of	Python					

- Beautiful is better than ugly
- Explicit is better than implicit
- Readability counts

. . .

- Special cases aren't special enough to break the rules
- Although practicality beats purity
- Errors should never pass silently
- If the implementation is hard to explain, it's a bad idea
- If the implementation is easy to explain, it may be a good idea

Why Python?	Why Biopython?	Examples 0000	Personalised history	Getting involved	Thanks 00	Next steps

A personalised Biopython history

- Biopython early history (first five years)
- Biopython when I got involved (about five years ago)

- Biopython recent history
- Retrospective

Why Python?	Why Biopython?	Examples 0000	Personalised history ●○○○○	Getting involved	Thanks 00	Next steps
Biopyt	hon early	histor	V			

- 1999: Started by Jeff Chang & Andrew Dalke
- 2000: Biopython 0.90, first release
- 2001: Biopython 1.00, "semi-complete"
- 2002: Biopython 1.10, "semi-stable"
- 2003: Biopython 1.20, 1.21, 1.22 and 1.23,
 - Jeff Chang hands over to Brad Chapman as project leader

◆□▶ ◆□▶ ◆□▶ ◆□▶ □ のQで

Biopython late 2004 – Lucky timing for me?

- Feb 2004: Biopython 1.24 release
- May 2004: Biopython 1.30 release
- Sept 2004: I started my PhD, began using Biopython
- Oct 2004: Spam on mailing lists becoming a big problem
- Dec 2004: Iddo Friedberg assumes project leadership,

Email thread: [Biopython-dev] To the core developers...

James Casbon: Is biopython dead? Iddo Friedberg: No but it sure smells funny. I apologize for that, ... Brad, Jeff: if you guys are busy, I can take over for a while.

- Feb 2005: Biopython 1.40 *beta* released (I had made some very minor contributions)
- March 2005: Most of spam on list archives removed Mailing lists made subscriber only (to reduce spam)

Biopython during my PhD

- Sept 2004: I started my PhD, began using Biopython
- Oct 2005: Biopython 1.41 released
- July 2006: Biopython 1.42 released (with my GenBank code)
- Mar 2007: Biopython 1.43 released (with my SeqIO code)
- Oct 2007: Biopython 1.44 released
- Mar 2008: Biopython 1.45 released
- May 2008: I start my new job at SCRI
- June 2008: Biopython 1.46 not released (due to my adding a last minute bug).
- July 2008: Biopython 1.47 released (with AlignIO code)
- August 2008: I submitted my PhD thesis

Now a steady release process, every three or four months,

э

			1 12			

How has Biopython has changed?

- I'd like to think the documentation and sequence basics is much easier for beginners now than five year ago.
- I'd also like to think the project has matured:
 - We have a deprecation policy for phasing out old code
 - New code must have unit tests and documentation
- Switching to a distributed version control system (git) has made it much easier for anyone to develop experimental new code, and do so in public (on the github.com website).

ション (日本) (日本) (日本) (日本) (日本)

- The timing was fortunate: At the start of my PhD, Biopython development had stalled - most of the key contributors were post-docs or more senior, and could not spare much time.
- As a PhD student, I had the time and the flexibility to work on Biopython code to support my own research needs.

I'm lucky to have been able to continue to spend time on
 Biopython while working

Why Python?	Why Biopython?	Examples 0000	Personalised history	Getting involved ●000	Thanks 00	Next steps

Getting involved (in Biopython)

You are all potential contributors! First steps:

- Sign up to the mailing list(s)
- Ask questions on the mailing list (please also ask me in person during this workshop)

- File bug reports if you find problems in the code
- Follow @Biopython on Twitter ;)

Why Python?	Why Biopython?	Examples 0000	Personalised history	Getting involved ○●○○	Thanks 00	Next steps	
Getting involved							

Later, as you get to know Biopython better, try to:

- Answer questions on the mailing list
- Share solutions to problems you've found (e.g. on your blog, or as a cookbook entry on our wiki)

▲ロト ▲得ト ▲ヨト ▲ヨト - ヨー の々で

• Suggest things for the documentation

Why Python?	Why Biopython?	Examples 0000	Personalised history	Getting involved 00●0	Thanks 00	Next steps			
Getting	Getting involved (continued)								

Once you feel more confident:

- Suggest bug fixes (patches or git branches)
- Write documentation
- Write unit tests (we always need more)
- Consider writing additional parsers, or modules ideally pick things that are important in your research (this makes justifying it easier to your boss/supervisor).

Why Python?	Why Biopython?	Examples	Personalised history	Getting involved	Thanks	Next steps

Getting involved in Open Source in general

- Most of that advice to open source projects in general
- I've made small contributions to many projects
- I believe in open source for science and in general
 - For reproducible results, must share data and code

Personal Acknowledgements

- MOAC Doctoral Training Centre, University of Warwick, UK
- EPSRC (UK) for MSc and PhD funding

 The James Hutton Institute, previously known as the Scottish Crop Research Institute, my supportive employer

Workshop on Genomics organisers and participants

Project Acknowledgements

- Open Bioinformatics Foundation (OBF) (Non-profit which looks after Bio* projects)
- BioTeam Inc. (Company that hosts the OBF servers)
- GitHub Inc. (Repository hosting)
- Google Summer of Code (Students funded in last three years)
- The many individuals who have contributed over the years
