

For this tutorial we will be using the Free Tier of Amazon Web Services.

You will require:

IP Address: Get it from [here](#)

Username: ubuntu

Key file: genomics_unix.pem

The data for this workshop can be downloaded from:

<https://s3.amazonaws.com/2017evomics/unix.tar.gz>

Don't download it to your laptop, you will need it on your virtual machine. There is no desktop available on this Virtual Machine so you will need to use SSH and your favourite terminal program.

Type this at your terminal:

```
wget https://s3.amazonaws.com/2017evomics/unix.tar.gz
tar zxvf unix.tar.gz
cd unix
```

Don't worry what this means yet, Julian will now explain!
